

## New features and functions

# PFAFF® CREATIVE VISION™ sewing and embroidery machine

We strongly recommend you always update your CREATIVE VISION™ with the latest software version.

### creative™ TEXTURE HOOP

Set your imagination free with the creative™ TEXTURE HOOP. It will turn your special embroideries to spectacular! With this new hoop you can weave ribbons, fibers and yarn to add texture and dimension to your embroidery. Update your CREATIVE VISION™ sewing and embroidery machine and it will show the creative™ TEXTURE HOOP as well as all other available hoops in the Hoop Selection list.

### Enhanced Dynamic shaping

With the Shaping feature you can create the most fantastic embroidery combinations using stitches and/or embroidery designs. You can now choose between different shape line positions, shape side positions and design angle. These new functions will together with the already great shaping feature give you even more creative possibilities.

### More stitches

The CREATIVE VISION™ sewing and embroidery machine has the most beautiful 9mm stitches and by updating your machine you will get 6 new border stitches, 2 new stitches to be used with the optional Beading foot and 4 new stitches made especially for the brand new Three Hole Yarn Foot. You will also get a new MAXI alphabet and 15 new MAXI stitches which are all excellent to use together with the Dynamic shaping

### Tapering in embroidery mode

You can now save a tapered stitch in sewing mode and use it as an embroidery design in embroidery mode.

### Update with the USB-stick

After this new update you will be able to do all further updates by using the USB-stick.

### Precise positioning

The fabulous precise positioning feature is developed even further. A new button takes you automatically to the maximum zoom and pans to the hair cross. This will make precise positioning even easier to use!

### Basting in the hoop

With the new basting function it is not only possible to baste around the embroidery design but also to baste as close to the hoop edge as possible. You can select to have one or both basting options active at the same time. This new function will give you even more freedom in your creative process.

## Color block selection

The color block selection have been given new features to make the color selection process faster and easier. It is now possible to multi-select colors or select equal colors to change them all at the same time. If you select one color block, the stitches in that color block is highlighted and the other color blocks of the embroidery are faded.

## Zoom

There are now three extra zoom possibilities! You can not only use the + and - to zoom in and out in the embroidery field, but you can also use your stylus to drag and drop on screen to "zoom to box", there is a quick "zoom to all" icon as well as an quick "zoom to hoop" icon. Everything done to make it easier to be more precise in the creative process.

## Software improvements

A number of software changes have been done in this new version from consumer requests. Such as...

- The CREATIVE VISION™ sewing machine can "read" more embroidery file formats; vp3, vip, hus, dst, shv, dhv, 10, exp, pcs, pcd, pcq, pec, pes, sew, xxx and jef.
- Basting in the hoop will start to sew in the upper right hand corner to make it possible to thread the first color even if the design is placed to the far left in the hoop.
- The machine will allow lower needle for Precise Positioning which will make it easier to step by step move to the exact spot.
- In Files & Folders you can select whether you want to display the files like icons or in a list view. The benefit with the new list view is that you will be able to see more files in the same view and a more detailed list of the file names.
- In the Settings menu\Machine setting you can select "Beading foot" which will make sure the tie-off stitches are done at the edge of the stitch and will prevent the machine to cut in the pearl.
- In "more options" in embroidery mode there will be an option whether you would like to display the designs in a three dimensional look or not. The 2D option will draw the embroideries on screen much faster and will also show colors in a more correct way.
- In the same "more options" you will also have the possibility to select background structure and background color independently of each other.

Thank you for your feedback and ideas! Please continue to give us your suggestions; they are very helpful to make the best sewing and embroidery machine in the world.
